The Lymphedema Treatment Act (LTA): Effective January 1, 2024

The LTA expands coverage for medically necessary compression garments and supplies for patients with lymphedema.

- ★ While **Medicare** now covers up to 3 day time garments per affected body part, every 6 months, many commercial and secondary insurance plans may also provide coverage.

Did you know? Your current healthcare provider can prescribe compression garments as part of your treatment plan. This may include your podiatrist, primary care provider, nurse practitioner, physician assistant, or other licensed clinician involved in your care.

Simple Start

Getting started is simple – Submit the patient's information, prescription and measurements. In some cases, insurance plans may also require supporting medical records.

Initial Eligibility

Many patients with lymphedema or post-procedural complications may qualify for coverage of medically necessary compression garments and supplies through Medicare or other insurance plans.

Consistent Benefits

Maintain continuous therapeutic support with insurance-covered benefits, including reorders or replacements every six months to ensure consistent care.

Contact our team to verify your insurance coverage and schedule a fitting.

Compression Wraps vs. Compression Stockings

Finding the Right Solution for Your Needs

While both **Compression Wraps** and **Compression Stockings** are designed to improve circulation and manage swelling, they offer unique benefits depending on your specific needs. Understanding these differences is key to ensuring maximum comfort, ease of use, and therapeutic effectiveness.

CHOOSING THE RIGHT OPTION

Treatment Consideration	Compression Wraps	Compression Stockings
Compression Control	Adjustable as swelling fluctuates	Fixed compression level
Ease of Application	Easy to apply with limited strength or mobility	Pull-on Elastic Hosiery
Fit Over Time	Adapts to daily limb volume changes	Smooth against the skin without bunching or deep creases
Best Use Stage	Active reduction & long-term management	Early intervention & daily management

COMPRESSION WRAPS

Adjustable, Adaptable, Easy Application

Compression wraps are inelastic garments using fasteners such as velcro, straps, or zippers, providing customizable, firm support that adapts to fluctuating swelling throughout the day.

Key Benefits:

- ✓ Fully adjustable compression for changing limb size
- ✓ Easier to apply and remove, especially for limited mobility
- ✓ Can be readjusted as swelling increases or decreases
- ✓ Often reusable and durable.

Medi/Circaid compression products feature the Built-In-Pressure System™ (BPS), allowing for adjustable and measurable compression to support consistent therapeutic care. Their wrap-style design promotes ease of use, improved fit, and better patient compliance compared to traditional compression options.

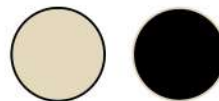

Circaid Reduction Wrap Lower Leg

- ✓ Multiple compression levels (20-30, 30-40, 40-50 mmHg).
- ✓ Built-In-Pressure system (BPS™)

Additional compression products, including nighttime garments, may be available based on individual clinical needs and coverage. Please contact us for information on products not shown in this catalog.

sigvaris

SIGVARIS compression wraps are adjustable, inelastic medical compression devices designed to improve circulation, reduce swelling, and support lymphatic health. Unlike traditional compression stockings, these wraps are easy to apply and adjust throughout the day, making them ideal for individuals managing conditions such as lymphedema. Their customizable fit and effective therapeutic compression help promote comfort, mobility, and consistent edema control as part of a prescribed compression therapy plan.

Sigvaris CompreFlex Contain Full Leg

- ✓ Provides 2x more containment than other CompreFlex products to address lower-extremity lymphedema.
- ✓ 20-50 mmHg of adjustable, gradient, inelastic compression.
- ✓ Stretch panel holds garment in place for easy application and high compliance.

AMERX EXTREMIT-EASE® compression wraps are constructed with a lightweight, air-permeable, latex-free fabric designed to reduce perspiration and minimize hot spots, promoting sustained comfort during extended wear. The innovative design helps prevent slipping and bunching commonly seen with traditional graduated compression garments, supporting consistent compression throughout the day. User-friendly features including a zipper closure and adjustable bungee system with large tabs enable easy independent application and precise adjustment, improving patient comfort and adherence.

Extremity-Ease® Compression Wrap

EXTREMIT-EASE is a high-performance compression garment designed to deliver effective therapeutic support while maximizing comfort and ease of use for independent wear.

- ✓ Provides 30–50 mmHg therapeutic compression.
- ✓ Zipper-and-bungee system allows easy application and adjustment, even with limited dexterity.
- ✓ Lightweight, breathable fabric for extended, comfortable wear.
- ✓ Helps reduce heat, moisture, and garment movement.
- ✓ Includes a garment liner and mesh laundry bag for added convenience.

compression wraps.

COMPRESSION STOCKINGS

Consistent, Sleek, Everyday Wear.

Compression stockings are elastic garments worn like socks or hosiery, providing continuous, graduated compression from the ankle upward.

Key Benefits:

- ✓ Smooth, discreet appearance under clothing
- ✓ Suitable for long periods of uninterrupted wear
- ✓ Available in various compression levels & styles
- ✓ Ideal for daily use and preventative care

sigvaris

Sigvaris® compression stockings provide medical-grade, graduated compression to support lymphatic flow and long-term edema control in patients with lymphedema. By promoting fluid movement and reducing lymphatic pooling in the lower extremities, these stockings help manage swelling, heaviness, and discomfort associated with chronic lymphedema. Designed for consistent daily wear, Sigvaris stockings support limb volume maintenance, tissue health, and functional mobility when used as part of a comprehensive lymphedema management program.

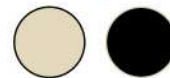

Sigvaris Dynaven Calf

- ✓ Dynaven CLASSIC is the functional, effective and opaque stocking for perfectly fitting basic care. It is ideal for both women and men. All models are available with open toe.

Available sizes: S–M–L–XL–XXL

Color:  

Additional compression products, including nighttime garments, may be available based on individual clinical needs and coverage. Please contact us for information on products not shown in this catalog.

Medi USA mediven® compression stockings deliver graduated compression to support circulation and reduce edema associated with lymphatic and venous conditions. Engineered for daily wear, mediven® stockings incorporate Clima Comfort® technology to actively transport moisture away from the skin, helping prevent heat buildup and enhance wearer comfort. Clima Fresh® technology, featuring an antibacterial agent integrated into the knit, helps reduce odor and supports skin hygiene. The result is a soft, comfortable fit that promotes improved mobility, extended wear time, and consistent compression therapy.

Mediven Waist Stocking

Standard Open Toe Compression Garment

Designed for everyday support and comfort, this waist-high compression garment helps improve circulation while allowing breathability and ease with an open-toe design.

- ✓ Waist-high compression for full lower-body support.
- ✓ Open-toe design for added comfort and airflow.
- ✓ Helps promote healthy circulation and reduce swelling.
- ✓ Comfortable, secure fit for daily wear.
